

Who is a good programmer?

Programming assignment help

I have noticed for the first time that I do not know how the article I started by me. For example, just recently I was asked to write a little note to the corporate newspaper about .NET direction. I chose a direction, began to develop it, resulting in an article in which the .NET was not at all. So this time we will continue the philosophical theme, but if last time it was about a good architecture, this time it will discuss who such a good programmer and what questions should ask yourself from time to time to move in the right direction.

What distinguishes a good programmer from mediocre? And how to become a good programmer yourself and deserve honor among friends and colleagues and respect?
